CAM SHAFTS

Camshaft is used to operate valves. It consists of a cylindrical rod running the length of the cylinder with a number of oblong lobes protruding from it, one for each valve. The cam lobes force the valves open by pressing on the valve, or on some intermediate mechanism, as they rotate.

MATERIALS

Camshafts can be made out of several types of material. These include: Chilled iron castings:
Billet Steel: 20MNCr5, 16MNCr5, EN8, SCM420
