VALVE TAPPETS

The tappet are also termed a cam follower, or valve lifter, It is that part that runs on the camshaft and is made to move vertically by the action of the rotating cam. In an overhead valve engine, this tappet is fitted low down in the engine block. From there it drives a long thin 'pushrod', up to the top of the engine, above the cylinder head.

MATERIALS

20MNCR5

PRODUCTION

100000 PCS./MONTH
